ETC Release Note

ColorSource Fixture Software

Product Line: ColorSource Fixture Software

Description: Version 4.1.1 System Software

Fixture Software Components	
ColorSource Fixture Software	4.1.1.44

Effective Date: 2024-03-07

Purpose

This release of the ColorSource fixture software adds support for the ColorSource PAR jr.

This release is only for the ColorSource PAR jr and is not for use with other ColorSource fixtures at this time.

For any questions relating to the contents of this release or the behavior of this software, please contact ETC Technical Services at the office nearest you. A list of ETC offices appears at the bottom of this page.

Availability

This software is currently available in shipping units of ColorSource PAR jr fixtures.

Documentation

Current documentation includes:

- *ColorSource PAR jr Installation Guide*

ETC manuals in portable document format (pdf) are available for download at etcconnect.com.

Compatibility

This release is compatible with the following ETC hardware:

- ColorSource PAR jr fixtures

Key Enhancements in v4.1.1

- Added support for the ColorSource PAR jr fixtures

Key Enhancements in v4.0.1

- Added support for the ColorSource CYC CPU3, ColorSource PAR CPU3, and ColorSource Spot jr CPU3 fixtures

Key Enhancements in v4.0.0

- Added support for the ColorSource PAR CPU3 fixtures

Key Enhancements in v3.0.0

- Added support for the ColorSource PAR CPU2, ColorSource Spot CPU2, and ColorSource Spot jr CPU2 fixtures

ETC Release Note

Fixture Software v4.1.1

Installation Instructions

All ColorSource fixtures ship with the current version of software and do not require an update before use. If you need to reinstall fixture software for any reason, follow the instructions below.

Update the Fixture Software

ETC recommends using UpdaterAtor software to manage software updates. For information on UpdaterAtor, see the *UpdaterAtor Software Quick Guide* and the *UpdaterAtor Software Release Note*, which you can download from etcconnect.com.

You can push newer software versions from a connected fixture to other ColorSource Fixture Software fixtures of the same type.

Note: *If you have other types of fixtures in your DMX run, you do not need to disconnect them before pushing the updated fixture software. The update process will ignore any other fixture types in the DMX run.*

Note: *Not sure what version of fixture software is installed? The version number appears on the display when the fixture powers up.*

1. Remove power and DMX In from the fixture that is running the software version that you want to push to other fixtures.
2. Press and hold the **Up** button and **Down** button simultaneously while restoring power.
3. The display shows **UdE rdY** to indicate the update mode is selected.
4. Press the **Mode** button to start the update process.
   - The first time that you push an updated software version, additional required files must be copied before the update can begin. The display alternates between **UdE** and **c:HH** to indicate the percentage complete while required data is copied.
   - The display alternates between **UdE** and the percentage complete while updating the connected fixtures.
   - The display blinks once to indicate that the update is complete.
5. Reconnect DMX In on the fixture.

Known Issues Remaining in v4.1.1

CSLED-29054	The color point shifts toward green at the end of a fade when the PWM frequency is set to 25kHz.
CSLED-37218	Fade can be steppy when fading RGB or presets that are on the edge of the color gamut.
CSLED-48134	When pushing a fixture update to connected fixtures, fixtures on the DMX run that are **not** receiving the fixture update can flicker.
CSLED2-160	Configuration changes just before a loss of power are not always saved. **Workaround:** After you change the configuration, wait a few seconds before removing power.
CSLED2-197	The display on a fixture can flicker when you push a software update from the fixture to other fixtures.
CSLED2-234	Flickering may occur when fixture temperature causes the fixture to power budget.
