ETC Release Note
Fixture Software v3.0.0

Key Enhancements in v1.0.0

- Initial release

Installation Instructions

All Source 4WRD Color II retrofits ship with the current version of software and do not require an update before use. If you need to reinstall fixture software for any reason, follow the instructions below.

Update the Fixture Software

ETC recommends using UpdaterAtor software to manage software updates. For information on UpdaterAtor, see the *UpdaterAtor Software Quick Guide* and the *UpdaterAtor Software Release Note*, which you can download from etcconnect.com.

You can push newer software versions from a connected fixture to selected Source 4WRD Color II fixtures (see table that follows).

Note: *If you have other types of fixtures in your DMX run, you do not need to disconnect them before pushing the updated fixture software. The update process will ignore any other fixture types in the DMX run.*

Note: *Not sure what version of fixture software is installed? The version number appears on the display when the fixture powers up.*

This fixture...	...can push software to these fixtures when connected		
	Source 4WRD Color ≤v1.1	Source 4WRD Color v2.0	Source 4WRD Color II v3.0
Source 4WRD Color ≤v1.1	X		
Source 4WRD Color v2.0		X	
Source 4WRD Color II v3.0			X

1. Remove power and DMX In from the fixture that is running the software version that you want to push to other fixtures.
2. Press and hold the **Up** button and **Down** button simultaneously while restoring power.
3. The display shows **UdE** to indicate the update mode is selected.
4. Press the **Up** button and **Down** button simultaneously to start the update process.
   - The display alternates between **UdE** and the percentage complete while updating the connected fixtures.
   - The display blinks once to indicate that the update is complete.
5. Reconnect DMX In on the fixture.

Known Issues Remaining in v3.0.0

S4WRDC-157 When you re-record a preset by capturing the current DMX look on the retrofit, the resulting preset does not precisely match the current DMX look.

Workaround: Use RDM to edit the preset.
